Project Tittle	Skill/Job Recommender System

Job Recommender Machines

This repository contains improvised approach for building job recommendation engine.

Dependencies

- * matplotlib
- * seaborn
- * pandas
- * numpy
- * ast
- * scipy
- * scikit-learn

Install dependencies

...

- * matplotlib: \$ sudo apt-get install libfreetype6-dev libpng-dev

\$ sudo pip install matplotlib

- * seaborn: \$ sudo pip install seaborn

- * pandas: \$ sudo pip install pandas

- * numpy: \$ sudo pip install numpy

- * ast: By default available

- * scipy: \$ sudo pip install scipy

* scikit-learn: \$ sudo pip install -U scikit-learn

...

Dataset

* You can download dataset from this [link](<https://www.kaggle.com/c/job-recommendation/data>)

* Make a folder `input_data`

* Put all datafiles inside this folder

Usage

Please run the code givne in jupyter notebook `Job_recommendation_engine.ipynb`
